

and the output of the firm is
the sum of the output of the two factors.
Each factor is plotted to show its
contribution to output. The two factors
are substitutable in production and their
marginal productivities are equal. The
two factors are perfect complements.

FIGURE 6.14 Isoquants for a Linear Production Function

The isoquants for a linear production function are straight lines. The $MRTS_{L,H}$ at any point on an isoquant is thus a constant.
